

Edinburgh Thoracic CT Course

2-3 April 2019

The course is designed to help you develop a systematic method of reviewing thoracic CT scans, and includes a combination of lectures and hands-on CT scan review with chest radiology experts. It is especially geared towards clinicians and trainees who are looking for a deeper understanding of CT scanning of thoracic disease but is also appropriate for radiology trainees and non-chest radiology consultants.

Over 300 thoracic CT scans are available for review on dedicated workstations (maximum 2 delegates per workstation).

Course topics:

- Understanding CT imaging technique and cross sectional anatomy
- CT signs in chest imaging
- Lung cancer diagnosis and staging
- Interstitial lung diseases (including pulmonary fibrosis , ATS/ERS IPF guidelines , sarcoidosis, occupational lung disease)
- Airways and airspace diseases (COPD, bronchiectasis, small airways disorders)
- Pleural disease
- Thromboembolic diseases (acute and chronic)

Awarded 14 CPD credits by the Royal College of Radiologists.
